Methodology, boundary and assurance

Reporting boundary. MEIL and every org unit beneath it recorded in EmeilSG (13 org units), for August 26-27. Only records that were verified, validated and approved are included.

Method. Emissions = verified activity data × emission factor, calculated record by record with the conversion factor version in force for the record's reporting period. Kilograms are shown as metric tonnes (÷ 1,000). Percentages are derived from summed counts, never averaged.

Emission factors and global warming potentials. These are the factors the reported calculations used. Gases other than CO2 are included only as far as each factor's source includes them, with the global warming potentials that source applies.
